

A**Fixed redundant duplicates**

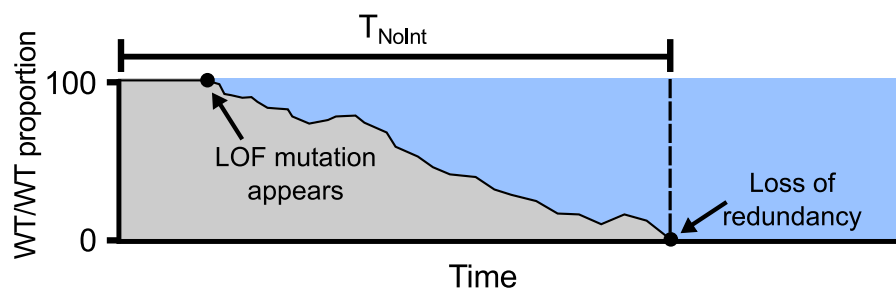

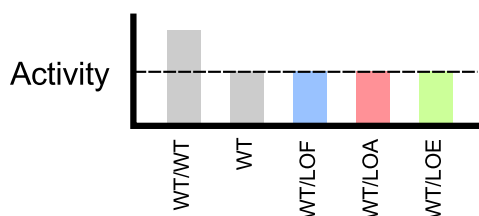

LOF transition rate
 $2NP_{Fix(F)}\mu_F$

LOA transition rate
 $2NP_{Fix(A)}\mu_A$

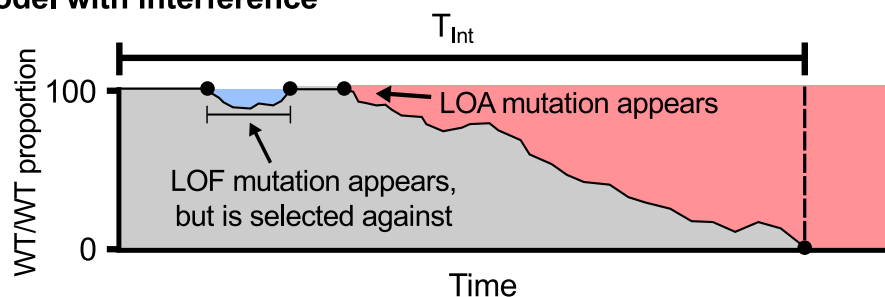

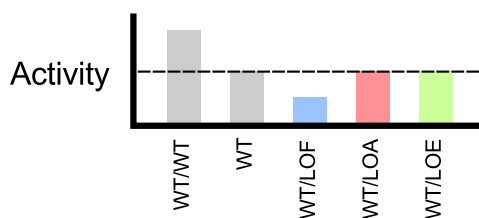

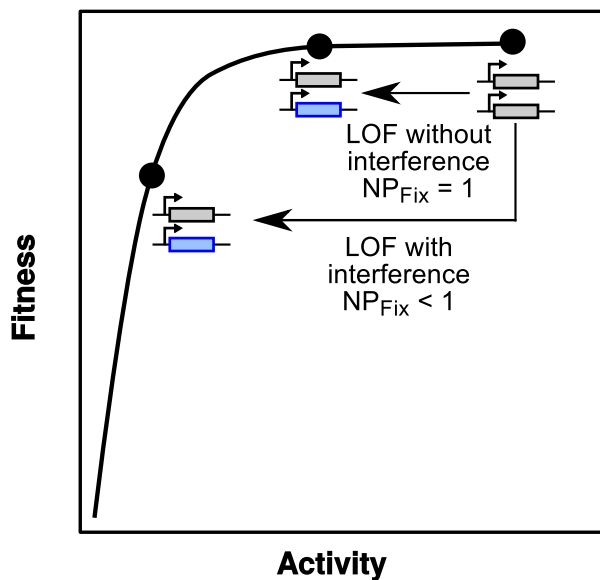

LOE transition rate
 $2NP_{Fix(E)}\mu_E$

Loss of function (LOF)**Loss of affinity (LOA)****Loss of expression (LOE)****B****Model without interference**

LOF is **equally deleterious** as LOA and LOE

**C****Model with interference**

LOF is **more deleterious** than LOA and LOE

**Comparing T_{Int} vs T_{NoInt} when the loss of one copy is nearly neutral****D****E**
